CLAUDE MAX OVERHEAD / MO

01 — EXECUTIVE SUMMARY

The opportunity, *fully costed*.

Automated lead generation with real overhead — and still profitable from the first close.

LeadForge AI is a one-person micro-agency powered by a Claude agent that executes a complete outbound sales cycle every weekday morning in under 15 minutes. The agent finds businesses without websites, sends personalised cold outreach, handles replies, and routes qualified leads to Neil Mitchell — who delivers a professional React / Next.js site in 3–5 days for a flat \$450.

The model has real overhead: the Claude Max 20x plan at \$200/month is the operational backbone, covering both the daily agent runtime and Claude Code for the site builds. At 3 sites/month, total monthly overhead runs approximately \$212, leaving a net cash profit of ~\$1,138 — an 84% margin. That margin improves with scale, since the \$200 Claude plan is a fixed ceiling regardless of build volume.

02 — PROBLEM

Millions of local businesses are *invisible online*.

The gap between a business existing and being discoverable is enormous — and largely ignored by agencies chasing enterprise contracts.

No Website at All

Millions of Canadian small businesses rely on word-of-mouth and a bare Google Business profile with no link to click.

Facebook-Only Presence

A Facebook page is not a website. These businesses are invisible to search engines and can't run SEO campaigns.

Broken or Outdated Sites

Many businesses list a site that returns 404s, loads broken images, or was built in 2009 — actively hurting credibility.

Instagram Only

Social-only businesses have no owned platform, no Google indexability, and are one algorithm change from invisibility.

Agencies Are Inaccessible

Traditional agencies charge \$3,000–\$15,000 for a basic site. The market is massively underserved at the entry level.

No One Is Asking Them

These businesses have accepted their digital invisibility. The solution must find them — proactively, every weekday morning.

03 — SOLUTION

Automate the *entire top of funnel*.

A Claude agent handles every step from discovery to booking. Neil only builds. One subscription covers both the agent runtime and the build tool.

What the Agent Does

- Searches Google Maps by category & region
- Detects missing or broken websites
- Extracts business name, email, phone, city
- Sends personalised cold outreach emails
- Reads and classifies replies
- Generates rough HTML mockups on request
- Books a call and routes to Neil
- Logs everything to a JSON lead database

What Neil Does

- Takes the 15–20 min discovery call
- Builds the site using Claude Code
- Deploys to Vercel
- Collects payment and transfers ownership
- Handles post-launch updates at \$50/hr

SINGLE SUBSCRIPTION COVERS BOTH

Agent runtime + Claude Code builds =
Claude Max 20x · \$200/mo

04 — OVERHEAD & RATE LIMITS

The real cost of *running on Claude*.

This model depends on Anthropic's infrastructure at two points: the daily agent runtime and the site build via Claude Code. Both are covered by one plan — but that plan has hard limits that must be factored honestly.

Rate limit reality: Claude Max 20x (\$200/month) provides an estimated 240–480 hours of Sonnet 4 and 24–40 hours of Opus 4 per week, governed by a 5-hour rolling window and a weekly ceiling (introduced August 2025). Claude Code sessions for full site builds are token-heavy — large system prompts, full file contexts, multi-step scaffolding — and consume capacity faster than simple chat. On high-build weeks, hitting the window limit mid-session is a genuine operational risk that must be planned around.

5-Hour Rolling Window

Usage resets every 5 hours across Claude.ai and Claude Code. The daily agent run (15 min, low token) is unlikely to stress this alone. A full site build on the same day competes for the same window. Schedule builds away from the morning agent run — afternoons work best.

Weekly Ceiling (Aug 2025+)

Anthropic introduced weekly rate limits in August 2025. Max 20x gets an estimated 240–480 hours of Sonnet 4 per week. Heavy Claude Code sessions on large codebases chew through capacity faster than the hour estimate implies. Monitor

`~/ .claude/` logs.

Overflow Cost

If weekly limits are hit, additional usage is available at standard API rates on top of the subscription. A full Claude Code build session on overflow could add \$5–\$25 per occurrence. This is modelled as a variable cost in the financials below.

Plan Comparison — Why Max 20x Is the Right Tier

PLAN	MONTHLY COST	CLAUDE CODE	SONNET 4 / WEEK	OPUS 4 / WEEK	VERDICT
Pro	\$20/mo	Yes (limited)	40–80 hrs	—	✗ Will hit limits mid-build
Max 5x	\$100/mo	Yes	140–280 hrs	15–35 hrs	⚠ Viable at 1–2 builds/month
Max 20x	\$200/mo	Yes (priority)	240–480 hrs	24–40 hrs	✓ Recommended headroom for agent + builds
API (PAYG)	Variable	Via SDK	Unlimited (token billing)	Unlimited	Evaluate at 6+ builds/month

Source: Anthropic rate limit announcements, July–August 2025. Estimates vary with codebase size, context length, and model. Opus 4 consumes capacity significantly faster than Sonnet 4.

Six Mitigation Strategies

TIME SEPARATION

Run the agent at 6:00 AM. Schedule Claude Code builds at 12:00 PM+ to avoid competing for the same 5-hour rolling window.

MODEL SELECTION

Use Sonnet 4 for agent tasks and most build scaffolding. Reserve Opus 4 for complex decisions only. Use `/model` to switch manually.

STAGGER BUILDS

Don't stack multiple builds on the same day. At 3 sites/month, space builds across the month — one per week maximum.

MONITOR LOGS

Anthropic doesn't surface usage in a dashboard. Check `~/ .claude/` session logs regularly. Third-party tools can parse token counts.

OVERFLOW BUDGET

Maintain a \$30–\$50/month API overage buffer. At scale, evaluate migrating the agent to pure API calls to decouple it from the subscription window.

5X AS FALLBACK

If volume stays below 2 builds/month in the first 60 days, Max 5x at \$100/mo may suffice — saving \$100/mo and lifting margins to ~91%.

05 — AGENT WORKFLOW

Seven steps. *Fifteen minutes.*

The agent executes a complete outbound sales cycle every weekday morning. Each step is fully autonomous within the runtime window.

01

LEAD DISCOVERY

Find businesses without a web presence

The agent queries Google Maps using category-based searches across the local region, province, and Canada as a fallback. Detects businesses with no website, broken URL, or social-only presence. Token usage here is low — short queries, structured extraction.

02

COLD OUTREACH

Send personalised cold email

The agent crafts and sends a personalised email using the extracted business name and category. Standard template with variable substitution — low token cost per send.

03

LEAD TRACKING

Log every contact to the JSON database

Every outreach event is recorded to a structured JSON lead store. Statuses progress through a defined lifecycle. Queried each morning to avoid re-contacting leads and to surface open follow-ups.

04

REPLY HANDLING

Read, classify, and respond to inbound replies

If a reply arrives within the runtime window, the agent reads it, classifies intent, and generates a conversational response. Five intent types handled autonomously. Moderate token usage — reading reply context plus generating a tailored response.

05

MOCKUP GENERATION

Generate a rough site concept for interested leads

When a lead expresses interest, the agent generates a rough HTML mockup — hero, services, contact — tailored to the business category. Higher token usage than earlier steps but well within the 15-minute window on Sonnet 4.

Hero Section

Services Block

Contact Section

Higher token cost

06

CLOSE FLOW

Book the discovery call

When a lead is ready to proceed, the agent sends a closing message routing directly to a phone call. Low token cost — short and direct.

*"Great — next step is a quick call. Please call me directly: **506-639-9083**. We'll review your needs and I'll begin building immediately."*

07

TERMS EXPLANATION

Communicate ownership, delivery, and pricing

The agent clearly articulates the delivery model: React / Next.js build via Claude Code, Vercel deployment, code ownership retained until payment, site transferred after payment confirmed. No ambiguity.

React / Next.js

Vercel

Code transfer on payment

Built via Claude Code

06 — MARKET OPPORTUNITY

A massive, untapped market.

Canada has over 1.2 million small businesses. A substantial fraction operate without a meaningful web presence — and LeadForge AI targets that gap with precision.

1.2M+

CANADIAN SMBS

Total addressable
market across all
provinces and
territories.

~34%

NO EFFECTIVE WEB
PRESENCE

Estimated share with no
site, a broken site, or
social-only presence.

~408K

SERVICEABLE LEADS

Conservative estimate
of businesses
LeadForge AI could
legitimately target.

07 — PRICING STRUCTURE

Simple. Flat. *No surprises.*

Pricing is designed to be transparently better than every alternative the prospect has heard of. That transparency is what gets the reply.

WEBSITE BUILD	MOST COMMON BUILD + SUPPORT BUNDLE	HOURLY UPDATES
\$450 flat rate · one-time	\$450 build + \$50/hr ongoing	\$50 per hour · post-launch
→ Fully deployed production site → Modern responsive design → SEO-friendly structure → React / Next.js codebase → Vercel deployment included → 3–5 business day delivery	→ Everything in Website Build → Post-launch updates at \$50/hr → Billed to the 10-minute interval → No minimum commitment → Prorate-fair billing always → Priority response for existing clients	→ Content updates → New page additions → Design adjustments → Feature additions → Prorated to 10-min intervals → No monthly retainer required

08 — FINANCIAL MODEL (FULLY COSTED)

Real margins. *Real overhead.*

Three scenarios across conservative, base, and growth volume. All include Claude Max 20x, estimated API overflow, and tooling costs. Builder time is noted separately as opportunity cost — not a cash expense in a solo operation.

Monthly Fixed Overhead — Every Month, Regardless of Volume

ITEM	COST	NOTES
Claude Max 20x Plan	\$200.00	Covers agent runtime (daily, 15 min) + Claude Code for all builds. Single subscription.
Email sending (Resend free tier)	\$0	Free tier covers ~3,000 sends/month — more than sufficient at this volume.
Vercel hosting (builder account)	\$0	Free tier covers hobby projects and client previews. Upgrade only if self-hosting many sites.
Domain — neil-mitchell.ca	~\$1.50	Amortised monthly (~\$18/yr). Referenced in every outreach email.
Cron scheduler (GitHub Actions)	\$0	Free tier provides 2,000 min/month. Agent uses ~300 min/month.
JSON lead store (flat file / SQLite)	\$0	No database hosting required at this scale.
Total Fixed Monthly Overhead	~\$201.50	Hard floor regardless of build count.

Variable Cost per Site Build

ITEM	BEST CASE	BASE CASE	WORST CASE	NOTES
Claude Code token overflow (API top- up)	\$0	~\$10	~\$30	If build session exceeds the 5-hr rolling window. Sonnet 4 billed at \$3/M input + \$15/M output tokens.
Client domain assistance	\$0	\$0	\$0	Client purchases their own domain. Zero cost to LeadForge AI.
Build time (opportunity cost — not cash)	4 hrs	6 hrs	10 hrs	Not a cash expense. At \$50/hr implied rate, represents \$200–\$500/site of builder time.
Cash variable cost per build	\$0	~\$10	~\$30	All-in per site, excluding builder time.

CONSERVATIVE

1 site / month

Revenue	\$450
Claude Max 20x	-\$200
Other fixed overhead	-\$1.50
Build overflow (worst)	-\$30
Net Cash Profit	\$218.50

Net margin: ~49%. Covers costs but barely motivating solo. Momentum is the goal.

BASE CASE ★

3 sites / month

Revenue	\$1,350
Claude Max 20x	-\$200
Other fixed overhead	-\$1.50
Build overflow (×3)	-\$30
Net Cash Profit	\$1,118.50

Net margin: ~83%. Claude plan amortised to ~\$67/build in overhead.

GROWTH

6 sites / month

Revenue	\$2,700
Claude Max 20x	-\$200
Other fixed overhead	-\$1.50
Build overflow (×6)	-\$60
Net Cash Profit	\$2,438.50

Net margin: ~90%. Claude cost now ~\$34/build. Evaluate API migration.

Annual Revenue Projection — Base Case (3 sites/month)

STREAM	Q1	Q2	Q3	Q4	ANNUAL
Site builds (3/mo × \$450)	\$4,050	\$4,050	\$4,050	\$4,050	\$16,200
Ongoing updates (growing base)	\$300	\$600	\$900	\$1,200	\$3,000
Total revenue	\$4,350	\$4,650	\$4,950	\$5,250	\$19,200
Total overhead (Claude + tooling + overflow)	-\$699	-\$699	-\$699	-\$699	-\$2,796
Net annual profit (before builder time)	\$3,651	\$3,951	\$4,251	\$4,551	\$16,404

Builder time: 6 hrs/site × 3 sites/mo = 18 hrs/month. At implied \$50/hr, this is \$10,800/year in labour — making effective annual earnings ~\$5,604 net of time cost. This is the Year 1 floor; recurring update revenue compounds as the client base grows.

BREAK-EVEN ANALYSIS

~0.45 sites

Exact cash break-even. One sale every ~7 weeks covers all costs. Everything beyond is profit.

1 site

Breaks even on all cash overhead per month with meaningful cash left over.

Day 1

Profitable from the first close. No inventory, no staff. Risk is time, not capital.

09 — AUTOMATION ARCHITECTURE & TECH STACK

Every layer *purpose-built*.

The stack is lightweight and requires no infrastructure investment beyond the Claude Max subscription. Every other component is free-tier-viable.

Claude Agent + Claude Code (Anthropic)

The entire operational backbone. Handles daily agent workflow and full site builds — all under the single Max 20x subscription at \$200/month.

Google Maps API / Scrape

Lead discovery layer. Queries Maps by category and geography, detecting absent or broken website links in business listings.

Email Automation (Resend)

Free-tier outbound email. The agent sends, logs, and reads replies within its runtime window. Free tier covers this volume entirely.

JSON Lead Database (SQLite / flat file)

Tracks all leads with status, timestamps, contact data, and conversation history. No hosting cost. Queried daily to prevent duplicate outreach.

HTML Mockup Generator (Claude)

Claude generates rough landing page concepts in HTML — category-aware, with hero, services, and contact sections — as inline previews to interested leads.

React / Next.js (via Claude Code)

All client deliverables built using Claude Code with Next.js App Router and Tailwind CSS. Accelerates builds to 4–6 hours per site.

Vercel

One-click deployment for every client site. Free tier handles CDN, SSL, and CI/CD. Projects transfer to client post-payment.

Scheduled Execution (GitHub Actions)

Cron trigger fires Mon–Fri at 6:00 AM with a hard 15-minute timeout. Free tier covers ~2,000 min/month; agent uses ~300.

10 — COLD EMAIL TEMPLATE

The email that *starts the conversation*.

Personalised, direct, low-friction. The goal is a reply — not a hard sell. Every double-brace field is dynamically populated by the agent.

From Neil Mitchell <[\[email protected\]](#)>
To {{BusinessEmail}}
Subject Quick website for {{BusinessName}} in 3–5 days

Hello {{BusinessName}},

I came across your business and noticed you currently don't have a website (or it appears outdated).

I specialize in designing modern, scalable, and aesthetically pleasing websites for local businesses. I have over 10 years of experience and can deliver a fully deployed professional website within 3–5 business days.

You can view my own professional site here: <https://neil-mitchell.vercel.app>

I offer:

- Flat rate: \$450 per site
- Delivered in 3–5 business days
- Fully deployed production site
- Modern responsive design
- SEO-friendly structure

After launch:

- \$50/hour for updates
- No minimum time
- Prorated to 10-minute intervals

If you'd like, I can even send a quick mockup tailored to your business.

Let me know!

Neil Mitchell

President & CEO · CTO

LeadForge AI | neil@leadforge-ai.ca

Real solutions, scalable results — at a fraction of the cost.

11 — REPLY AUTOMATION LOGIC

Every reply gets *a real response*.

The agent classifies inbound replies into five intent buckets and generates a contextually appropriate conversational response — all within the 15-minute runtime window.

12 — DELIVERY PROCESS

Discovery call to *live site in five days*.

Once a lead converts, Neil takes over with a clear, repeatable delivery process — powered by Claude Code to accelerate every build.

Day 0	Discovery Call · 15–20 minutes Client calls 506-639-9083. Discuss business goals, design preferences, required pages, branding assets, and domain situation. Conversational, no lengthy brief.
Day 1–2	Build · Claude Code scaffolds the React / Next.js site Claude Code scaffolds the Next.js project, generates page components, styles with Tailwind. Scheduled in the afternoon (12 PM+) to avoid competing with the morning agent's rolling window. Typical build: 4–6 hours. Deploy preview URL to Vercel on completion.
Day 3	Review · Client feedback round Share the Vercel preview link. Collect feedback via email or call. One revision round included. Additional changes billed at \$50/hr after that.
Day 4	Revisions · Claude Code applies changes Use Claude Code to implement feedback. Low token cost for targeted edits. Confirm mobile responsiveness, final copy, contact form function. Send for final approval.

Day 5

Launch · Payment → Domain → Transfer

Client pays \$450. Domain connected. Site goes live. GitHub repo and Vercel project transferred post-payment. Hosting managed by Neil or handed to client — both options supported.

13 — LEGAL & OWNERSHIP MODEL

Clear terms. *No grey areas.*

The ownership and transfer model is communicated proactively by the agent — before the client ever gets to a call. Transparency builds trust and protects the builder.

I **Code Ownership Until Payment**

LeadForge AI retains full ownership of the codebase until \$450 is received. The client gets a Vercel preview during review but no code transfer until payment clears.

2 **Domain Purchased by Client**

The client purchases their own domain. Neil assists with DNS configuration at no extra charge as part of the launch process.

3 **Site Transfer After Payment**

On payment confirmation, Neil transfers the Vercel project, GitHub repo, and all assets. The client controls their deployment and hosting thereafter.

4 **Hosting Handled by Neil or Client**

Client may retain Neil's Vercel account or transfer to their own. Vercel's free tier covers all small business traffic needs.

5 **CASL Compliance (Cold Email — Canada)**

All cold outreach complies with Canada's Anti-Spam Legislation. Each email includes sender identification, a business address, and an opt-out mechanism. B2B prospecting to business email addresses falls under CASL's business card exemption when handled correctly.

14 — GROWTH & SCALING STRATEGY

Start lean. *Scale deliberately.*

LeadForge AI starts as a solo operation. As revenue and volume grow, the scaling path is clear — and the fixed Claude subscription becomes an increasingly efficient cost per build.

Phase 1
Month 1-3

Foundation — Prove the model at Max 5x

Start with Max 5x (\$100/mo) if volume stays at 1–2 builds/month. Close the first 5 sites, collect testimonials. Monitor Claude Code token consumption carefully. Upgrade to Max 20x (\$200/mo) when builds exceed 2/month or when hitting 5-hour window limits mid-build.

Phase 2
Month 4-6

Expansion — Wider geography and follow-up sequences

Extend agent searches across the province and beyond. Test Day 3 and Day 7 follow-up sequences. Add a Calendly link to reduce call-booking friction. At 3+ builds/month, the \$200 plan is fully justified at ~\$67/build overhead.

Phase 3
Month 7-12

Leverage — Recurring update revenue compounds

With 20–30 deployed sites, focus on ongoing update revenue. Offer optional monthly care plans (\$99/month for up to 2 hours of updates). The agent continues generating new leads while existing clients provide compounding income.

Phase 4
Year 2+

Scale — API migration and outsourced builds

At 6+ builds/month, migrate the agent to direct Anthropic API billing (pay-per-token) to decouple from the subscription window. Hire a contract builder for overflow. Raise the site build price to \$650 as the portfolio strengthens. Explore licensing the LeadForge AI system to other solo developers.

15 — APPENDIX

Reference material & quick specs.

Agent Runtime Spec

Schedule	Monday–Friday
Runtime limit	15 minutes hard cap
Trigger	Cron / GitHub Actions
Execution	Fully autonomous
Model — agent	Sonnet 4 (preferred)
Model — builds	Sonnet 4 / Opus 4 (heavy tasks)
Human entry	Post-qualification only

Monthly Overhead Summary

Claude Max 20x	\$200.00
Domain (amortised)	\$1.50
Email sending	\$0 (free tier)
Vercel hosting	\$0 (free tier)
Cron scheduler	\$0 (GitHub Actions)
API overflow buffer	~\$10–\$30 variable
Total (base case)	~\$211.50
